

## Diligence and care set a precedent in Costa Rica!

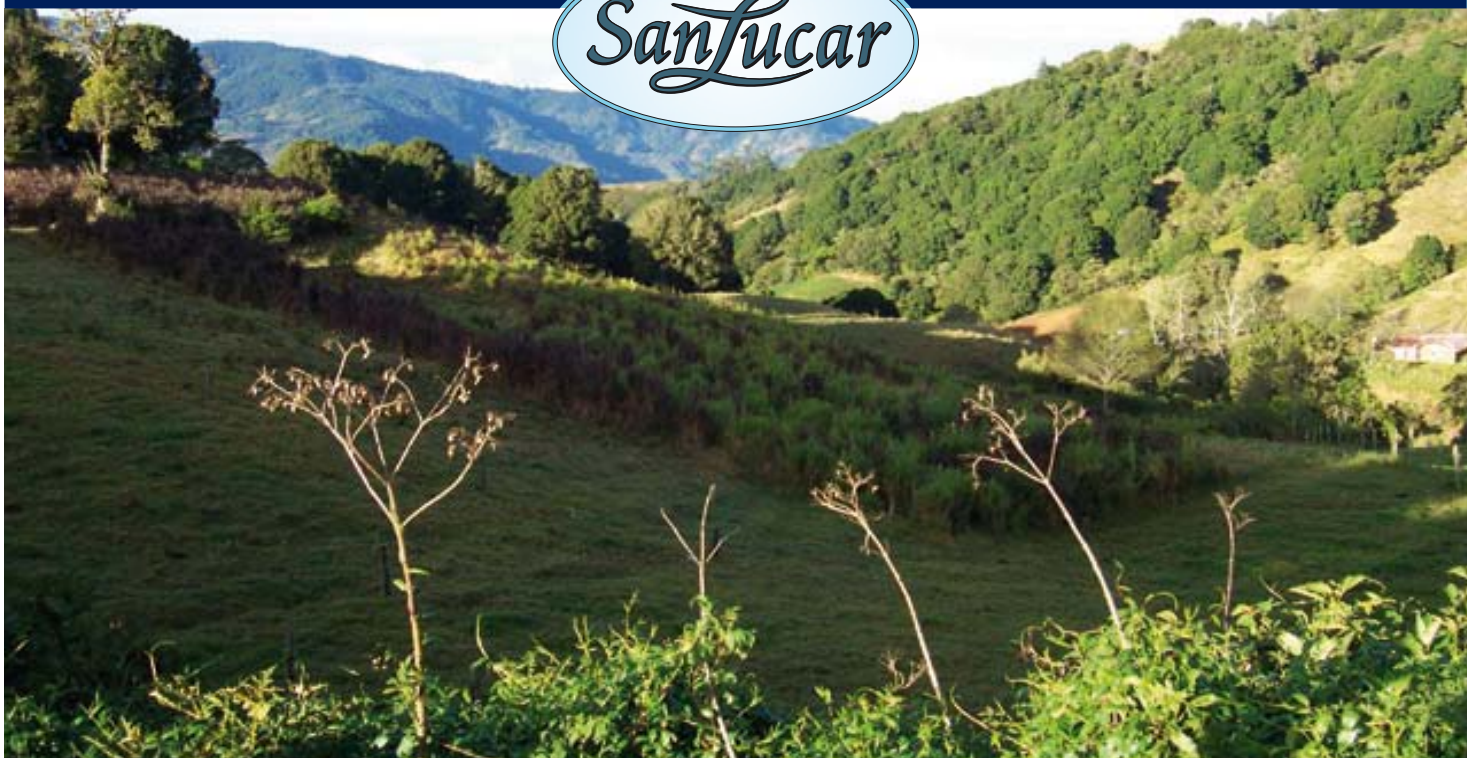

Only with the help of nature and our growers from all over the world, can we offer you delicious fruits and vegetables with unique quality. Therefore we want to say thank you: For taking nature into consideration and doing everything to improve the living conditions of the people in our growing regions.

# A thank-you, which sets a precedent.

In Costa Rica the children really like going to school. Unfortunately, the school installations in the villages are often inadequate; furthermore, money is lacking for the much-needed refurbishment of two schools in direct proximity to our growing region.

Together with our grower we have started the project "school reconstruction". Our goal: to offer the approximately 150 pupils of these two schools a better environment, in which they can go to class with pleasure.

From April to July 2008 we have renovated the electrical installations, have constructed new sanitary installations and we have bought new tables and benches. After finishing with everything, there was still enough space for a beautiful children's playground.

There was great joy at the opening event: all children now have a table and a chair and hence can have lunch together at a common table. They can afterwards have fun at the playground!

As education for the future of the children plays a pivotal role, we are proud of the support we can offer through our initiatives. Only in this way can we give our employees and their families something in return.
